Cardiopulmonary Physiotherapy in Trauma: An Evidence-based Approach 2nd Edition

"Cardiopulmonary Physiotherapy in Trauma: An Evidence-based Approach, 2nd Edition" by author Mary A. M. L. B. van der Touw, published by Elsevier, is an essential resource for healthcare professionals involved in the management of patients with trauma-related cardiopulmonary conditions. This comprehensive guide meticulously bridges the gap between theory and practice, offering evidence-based strategies for rehabilitation in critically injured patients. The second edition has been thoroughly updated to reflect the latest research findings and clinical practices, ensuring that readers are equipped with the most current and relevant information. With a strong emphasis on patient-centered care, the book covers a wide array of topics, including assessment techniques, treatment modalities, and innovative approaches to enhance recovery and improve respiratory function. Each chapter is enriched with clinical case studies that illustrate the application of physiotherapy interventions in real-world scenarios, making it an invaluable tool for physiotherapists, occupational therapists, and medical practitioners alike. The inclusion of practical guidelines and protocols facilitates effective implementation in diverse clinical settings. Additionally, the book addresses the challenges and complexities that arise in managing traumatic injuries, providing insights into interdisciplinary approaches that can optimize patient outcomes. The ISBN for this pivotal text is 978-0-323-69401-7, making it easy for readers to locate. Whether you're a seasoned practitioner or a student entering the field, "Cardiopulmonary Physiotherapy in Trauma" is a must-have addition to your professional library, empowering you to deliver the best care possible for your patients in need of trauma rehabilitation.
