[Radiologic Science for Technologists: Physics, Biology and Protection 11th Edition](#)

"Radiologic Science for Technologists: Physics, Biology and Protection, 11th Edition," authored by Stewart C. Bushong, is an essential resource for both aspiring and practicing radiologic technologists. Published by Elsevier, this comprehensive textbook provides a thorough exploration of the principles of radiologic science, integrating physics, biology, and patient protection in a clear and accessible manner. With the ISBN 978-0323357626, this edition presents updated content that reflects advancements in technology and clinical practices, ensuring that readers are equipped with the most current knowledge in the field. The book covers a wide range of topics, including the fundamentals of radiation physics, biological effects of ionizing radiation, and effective protection measures, all supported by engaging illustrations and practical examples. With a structured approach to learning, it enables students to develop a solid understanding of the scientific foundations underlying radiographic procedures. Emphasizing the importance of safety and quality in patient care, Bushong's work serves as a vital reference for enhancing technical skills and fostering a commitment to high standards in radiology. Whether used in the classroom or as a valuable self-study aid, this textbook is indispensable for those preparing for a career in medical imaging and those who seek to stay informed in a rapidly evolving discipline. Designed with both comprehensive coverage and user-friendly organization, "Radiologic Science for Technologists" stands out as a leading text that not only educates but also inspires future technologists to excel in their profession, making it a must-have for anyone serious about the field of radiologic science.
