[Autologous fat tissue transfer: Principles and Clinical Practice 1st ed. 2019 Edition](#)

"Autologous Fat Tissue Transfer: Principles and Clinical Practice," authored by Dr. M. C. Chao and published by CRC Press in 2019, serves as a comprehensive guide to one of the most innovative and effective techniques in regenerative medicine and aesthetic surgery. This first edition meticulously explores the principles underlying autologous fat transfer, detailing the biological and technical aspects of fat harvesting, processing, and reinfiltration. Drawing on a wealth of clinical experience, the author presents evidence-based strategies and best practices for enhancing outcomes in various applications, from reconstructive surgeries to cosmetic procedures. With a strong emphasis on safety and patient satisfaction, this book incorporates the latest advances in fat grafting methodologies and addresses potential complications and their management. Each chapter is enriched with high-quality illustrations and case studies that illuminate the conceptual frameworks and practical considerations necessary for successful fat transfer procedures. The publication is ideal for plastic surgeons, dermatologists, and health professionals interested in expanding their knowledge and skills in this rapidly evolving field. Furthermore, the ISBN for this essential resource is 978-1138337803, making it easily accessible for practitioners and trainees alike. By blending scientific rigor with real-world applications, "Autologous Fat Tissue Transfer" stands as an indispensable reference, ensuring that readers are well-equipped to navigate the complexities of fat transfer techniques in their clinical practices. Whether you are a seasoned professional or a newcomer to the field, this book will broaden your understanding and enhance your ability to achieve optimal results in fat tissue transfer.
