[Davis's Drug Guide for Nurses 18th Edition](#)

"Davis's Drug Guide for Nurses, 18th Edition" by April Hazard Vallerand and Cynthia A. McGowan is an indispensable resource for nursing professionals seeking to deepen their understanding of pharmacology and improve patient care. Published by F.A. Davis Company, this guide is meticulously updated to provide comprehensive and up-to-date drug information, ensuring nurses can access reliable details about medications commonly used in clinical practice. The 18th edition features over 5,000 medications, including new drugs as well as important updates to current information, organized in a user-friendly format that supports quick reference. The guide encompasses essential pharmacological data such as indications, dosages, nursing considerations, contraindications, and potential side effects, helping healthcare providers make informed decisions swiftly. Additionally, the book includes clinical insights and safety information to support nurses in administering medications confidently and accurately, while also emphasizing the importance of holistic patient care. With its robust features and clear organization, "Davis's Drug Guide for Nurses" serves as an authoritative tool for nursing students and practicing nurses alike, enhancing their clinical judgment in medication management. The ISBN for this essential resource is 978-1719646490, making it easy for healthcare professionals to locate and purchase. Elevate your nursing practice with this comprehensive guide that prioritizes patient safety and effective medication administration, ensuring you remain at the forefront of nursing excellence.
