[A Practice of Anesthesia for Infants and Children 6th Edition + Video](#)

"A Practice of Anesthesia for Infants and Children, 6th Edition, with Video" is an essential resource for anesthesia practitioners specializing in pediatric care. Authored by the esteemed Charles J. Cote, MD, a respected figure in the field, this comprehensive volume is published by Elsevier and equipped with a valuable video component that reinforces learning through visual demonstrations. With ISBN 978-0323357621, this updated edition delves into the intricacies of anesthetic management for infants and children, addressing contemporary challenges and techniques. The text meticulously covers essential topics, including preoperative assessment, anesthesia techniques tailored for pediatric populations, and postoperative care, ensuring that the reader is well-equipped to handle a wide array of clinical scenarios. Each chapter is enriched with contributions from leading experts, providing insights that reflect the latest research and advancements in pediatric anesthesia. The inclusion of high-quality video content enhances the reader's understanding of complex procedures, offering practical guidance that is applicable in the operating room. This edition also emphasizes the importance of safety, emerging technologies, and evidence-based practices, making it an invaluable tool for both seasoned practitioners and those newly entering the field. Whether you are a pediatric anesthesiologist, resident, or medical student, this book serves as a vital reference that combines theoretical knowledge with real-world applications, ensuring the highest standard of care for vulnerable young patients. Staying current with the evolving landscape of pediatric anesthesia, this text is a must-have for anyone committed to achieving excellence in the field.
