[The Interventional Cytopathologist: Ultrasound Guided Fine-Needle Aspiration of Superficial Masses with Ultrasound Correlation 2nd Edition](#)

"The Interventional Cytopathologist: Ultrasound Guided Fine-Needle Aspiration of Superficial Masses with Ultrasound Correlation, 2nd Edition" is an essential resource for pathologists, cytotechnologists, and other medical professionals involved in the diagnostic process. Authored by esteemed expert Dr. Michael M. Thorne, this comprehensive guide, published by Springer in 2021, delves into the intricacies of ultrasound-guided fine-needle aspiration (FNA) techniques for the evaluation of superficial masses. With the ISBN 978-3030667563, this edition offers updated methodologies, a wealth of clinical examples, and practical insights into the role of ultrasound correlation in enhancing diagnostic accuracy. Dr. Thorne meticulously outlines the principles and practices of FNA, addressing common pitfalls and offering solutions to optimize sample collection. The book features high-quality images and detailed descriptions of various conditions, making it an invaluable tool for both novice and experienced practitioners. In addition to technical guidance, it emphasizes the importance of cytological evaluation in the multidisciplinary approach to patient management. The second edition reflects the latest advancements in ultrasound technology and cytopathology, ensuring that readers stay at the forefront of this evolving field. Whether you are looking to refine your skills or to better understand the complexities of tissue sampling, "The Interventional Cytopathologist" is a must-have addition to your medical library. This book not only serves as a practical guide but also as an authoritative reference that will enhance your clinical practice and confidence in performing ultrasound-guided FNAs.
