[Nursing Outcomes Classification \(NOC\): Measurement of Health Outcomes 6th Edition](#)

Nursing Outcomes Classification (NOC): Measurement of Health Outcomes, 6th Edition, authored by Mary A. D.; Herdman, and published by Elsevier, is an essential resource for nursing professionals seeking to enhance their understanding of patient outcomes through evidence-based measurement. This comprehensive guide offers a refined framework that allows nurses to systematically evaluate the effectiveness of their interventions and ultimately improve patient care outcomes. The sixth edition features updated measurement tools, expanded definitions of nursing-sensitive outcomes, and an expanded focus on the critical role nurses play in the healthcare system. With its user-friendly format, this edition facilitates the integration of NOC into various nursing practices and educational settings. The inclusion of real-world case studies and practical examples allows readers to see the application of NOC in diverse clinical scenarios, making the content not only informative but also applicable. This book also emphasizes the importance of standardized outcomes in quality improvement and accountability in nursing practice, thereby promoting consistency and reliability in patient assessments. With its strong emphasis on measurable health outcomes, this edition is an invaluable asset for nurse educators, nursing students, and practicing nurses alike. The ISBN for Nursing Outcomes Classification (NOC): Measurement of Health Outcomes, 6th Edition is 978-0323357622, making it easy for healthcare institutions and educators to access this pivotal text. Enhance your nursing practice with this indispensable guide to patient-centered care and the measurement of health outcomes, and ensure you are at the forefront of evidence-based nursing.
